PORTFOLIO

albert-fer02.github.io/DreamFolio

LOCATION

Perú 🇵🇪

FOCUS

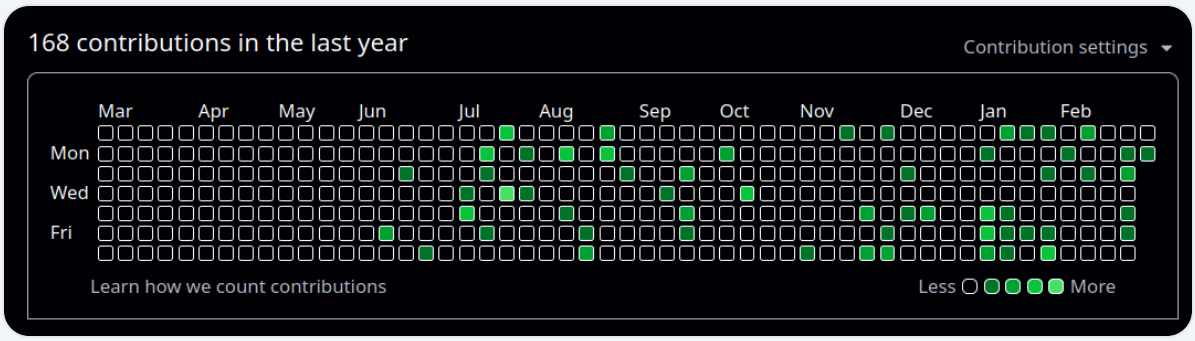
Systems Architecture · Infrastructure

ABOUT

Designing systems that compound over time. Focused on high-integrity infrastructure, autonomous execution, and long-horizon architectures. Builds systems that remain operable under scale, latency pressure, and imperfect conditions.

CORE STACK

Rust · Go · TypeScript · Python · PostgreSQL · Redis · React



02 ACTIVE SYSTEMS

01

ARKONYX — Autonomous Fiscal Infrastructure

A fiscal operating system engineered for the evolving SUNAT landscape

github →

- Rust FFI core for deterministic XML and cryptographic processing
- Autonomous agent orchestration for real-time auditing

Rust · FFI · Agents

→ High-integrity pipelines designed for adversarial environments

Cryptography

02

EdgeTraz Agro — Edge & IoT Resilience

Offline-first traceability infrastructure for industrial environments

github →

→ Rust async runtimes for constrained edge hardware
→ Idempotent synchronization in zero-connectivity zones
→ End-to-end auditability from field to port

Rust Async · IoT · Edge Computing · Offline-First

03

Digital_Public_peru — Civic Digital Infrastructure

Open infrastructure platform for Peruvian governmental environments

github →

→ Architecture built for data integrity and public transparency
→ Resilient under adversarial conditions and high concurrency
→ Integration with governmental ecosystems and distributed validation

Rust · Go · TypeScript · Civic Tech

03 ENGINEERING APPROACH

I

Integrity over convenience

Data systems must assume adversarial conditions. Correctness is non-negotiable; shortcuts compound into failure.

II

Performance as a primitive

Latency is a design constraint, not an optimization. It must be considered from the first architectural decision.

III

Composable autonomy

Systems should operate independently and converge via robust, well-defined interfaces — not implicit coupling.

04 TECHNICAL DOMAINS

LAYER	STACK
PERFORMANCE	Rust · Go · Low-level concurrency
BACKEND	Bun / Elysia · Python data engines
INFRA	PostgreSQL · Redis · Docker · Arch Linux
INTERFACES	TypeScript · React · Data visualization
